

## iBS Version 3.x

### I've re-sized a panel to become full screen, now how to restore it to its default size?

If any panel get maximized and the 3 dots () becomes at the top of screen or at the bottom, it will be so difficult to restore the panel to its default size due to the default system darg gesture to open Notification Center or iOS7 Apple's Control.

iBS has a solution for this : just double tab the 3 dots () and the panel will be restored to its default size.

Unique solution ID: #1008
